

Stream No. 23 (2 notices)

Bettles Bay, Port Wells.

Width: 20 feet

Depth: 10 inches

In the first quarter mile of stream, the water spreads out, making a width of spawning space varying from 50 to 100 feet. Bottom is all fine gravel. Fish upstream 3,000 feet,—rather thin at upper end. Stream empties into a lagoon; several small issues enter it also.

Aug. 6, 1926: 33,000 fish alive and dead.

Aug. 11, 1927: 44,000 fish.

Stream No. 24 (2 notices)

Hummer Bay, Port Wells.

North side of stream is 27 feet wide and 8 inches deep.

The other part comes out about the center of grass flat and is 20 feet wide and 6 inches deep,—accessible about 1/2 mile.

Both have the best bottom,—fine gravel.

July 24, 1926: 10,000 fish here, principally dogs in larger stream.

Aug. 12, 1927: 13,200 fish.

Stream No. 24A

Pirate Cove.

Large stream on north side is 40 feet wide and 10 inches deep, and swift.

Accessible 300 feet above high tide line. Is 100 feet wide above high tide line. Rough boulder and gravel bed.

Small stream on south 10 feet wide and 3 inches deep.

Accessible 1,000 feet. Fine gravel bed. No water dry weather.

Aug. 12, 1927: 5,000 fish

Stream No. 25 (2 notices)

Pigott Bay, Port Wells.

Stream entering at northwest corner of head is 20 feet wide and 8 inches deep.

Another one 12 feet wide and 5 inches deep enters about 1/4 mile southwest of the above mentioned stream. Large stream bed is about 50 feet wide around mouth.

One stream on southwest side is 27 feet wide and 8 inches deep.
